IBM with Meggit M4

Meggit M4 is an Industry 4.0 project. It demonstrates the value of applying consulting skills to transform concepts into reality. Meggit PLC is a global engineering group specialising in extreme environment components for aerospace. They faced an increasingly volatile and disrupted market and needed to address a number of challenges.

At its core, the M4 'factory of the future' has an information architecture developed by IBM which provides a digital backbone to meet Meggit's ambitions, challenges and requirements. The sophisticated information model has proven to be robust and flexible, meeting all requirements and requiring very few changes.
