MCA AWARDS 2018

MCA Awards 2018 Finalist

Digital & Technology
Thales Cyber & Consulting with Jaguar Land Rover

The motoring world is changing, vehicles are becoming more electronic, more autonomous and more software orientated; as this trend continues vehicle safety and integrity needs to keep up.

Manufacturer's face the prospect they'll be required to validate vehicle software behaves as it should, is genuine, and detect software tampering. If they cannot do this they run the risk of lawsuits, compensation claims and major brand reputational damage.

TC&C consultants were chosen by Jaguar Land Rover to deliver plans to create and implement a secure cyber security solution for JLR's current vehicles and those in development.
