

MCA Awards 2018 Finalist

Digital & Technology Consultant of the Year

Ramandeep Datt, BearingPoint

Digital natives are leading the charge in the fourth industrial revolution, leveraging platform-based business models to harness and disrupt all industry verticals.☒

As a key member of BearingPoint's Digital Ecosystem Management (DEM) practice, Ramandeep has been at the forefront helping clients adapt and harness the power of platform business models for accelerated transformation and revenue growth.

Leveraging practical experience gained in the cutting-edge DEM space, coupled with his broader digital architecture and business consulting expertise, Ramandeep provides valued leadership, helping clients shape and execute their digital journey.

As the lead architect, Ramandeep has been instrumental in defining the overall architecture and subsequent onboarding of various cloud offerings onto BT's Compute Management System (CMS) to support their "Cloud of Clouds" portfolio strategy of offering integrated access to multiple cloud services from different providers through a single digital platform in self-service mode.

With maturity of the CMS platform, Ramandeep then provided the drive to formalise BT's digital Business Platform as a Service called "Personalised Compute Management System" (PCMS). He collaborated with BT teams to define the included service components as well as design the supporting application and infrastructure architecture for this multi-tenant business platform.

His current role encompasses working with client businesses to exploit the power of PCMS for launching their digital services by adopting lean start-up methodologies to create new revenue streams and challenge the status quo. He is well recognised by his clients and teams as a trusted, passionate, consultant and a leader who brings the best out of people.
